

Vink Hoofcareframe

The VINK Hoofcare frame is:

- A new apparatus which can easily be attached to any type of stall.
- In this way you always have a Hoofcare box at hand in which you can examine and treat the animal single-handed in a place that is familiar for the cow.

- Always available so that an affected leg can immediately be treated.
- Solidly constructed with a specially developed safety winch.
- Can also be used for teat and udder treatments.
