

# BOOT WASHER

The boot washer which does clean the boot on all sides.

While the boot is moving inside the washer, rotating jets forcefully spray a large amount of water from all sides against the boot. This ensures full cleaning of the sides and soles of the boots. The boots are cleaned within 6 seconds. No brush, as brushes will not reach the difficult spots and will get contaminated.

After having cleaned the boot with water, it can be disinfected easily. Clean and disinfected boots for more hygiene at your farm. For a good result a water pressure of 4 to 5 bar and an amount water of 1 liter per second is needed. The boot washer is suitable for your own water supply.
