

HYDROMATIC FOOTBATH

**Cleans the hooves thoroughly
and disinfects effectively**

This walk-through foot bath consists of two adjacent channels through which your medication or disinfectant is pumped at great speed. When the cows walk through the channels, the liquid is sprayed forcefully against the feet and heel removing contamination from wounds and the interdigital space. The powerful jets spray the medication into the hard-to-reach areas between the cow's toes and behind her heel. The hydromatic foot bath uses two divided channels which helps the cows to walk slowly through the 3 meter long bath.

This process allows the treatment sufficient time to penetrate her feet thoroughly. As the cow walks through the foot bath and receives her treatment, the water is filtered with a sieve and brush to separate the solid contaminants from the liquid. Per cow you will lose approx. $\frac{3}{4}$ liter liquid which will automatically be re-filled.

Vink Hydromatic footbath

When the cows walk through the channels, the liquid is pumped around in the foot bath and sprayed forcefully against the feet and heel removing contamination from wounds and the interdigital space.

The system contains about 20 liter of liquid, which is pumped around as soon as the sensor detects the cow. Approx. 3/4 liter per cow spilled liquid will be automatically refilled

The advantages:

- Powerful jets spray the liquid against the cow's foot and heel for deep cleaning in the critical interdigital space
- The design and length of the channels help the cows to walk slowly, therefore achieving intensive cleaning and penetration
- The filtration techniques along with continuously adding new liquid to the holding tank preserves the quality of the treatment from the first cow to the last cow.
- No manual work - the system cleans and fills itself automatically
- The system is solidly constructed entirely of stainless steel
- All substances that are soluble in water can be used
- Water consumption is low – Approx. 4 liter (1 gallon) per 5 cows

HYDROMATIC FOOTBATH

- Material:** The 3.2 meter foot bath is completely stainless steel
- Position:** Permanently installed after exit from the milking parlour.
- Use:** For curative treatment: 3 to 7 x per week Preventative treatment: 1x per week
- Water consumption:** Approx. 4 liter (1 gallon) per 5 cows.
Remember, the hydromatic foot bath is automatically cleaned and the water recycled and refilled continuously.
- Result:** From research in the field it appears that after 6 weeks of curative treatment of the cows, the desirable results will be achieved. The hydromatic foot bath by Vink is an ideal method for treating and preventing infectious hoof disorders.

An asset to any stable, a must for the mega stable
