

ROTATING CATTLE BRUSH

Watch our product video on:
www.vink-elst.nl

Elastic Suspension

- Resistant against animals in heat and mounting each other.
- Adapts itself to the height of any cow by the elastic suspension.
- Also brushes the animal's sides

The Vink Rotating Cattle brush consists of a rotating cylindrical brush, driven by an electric motor in the axle. It is elastically suspended from a truss in the barn. As soon as the cow makes contact with the brush, the motor starts turning clockwise or counterclockwise. Firstly this makes the brushing more effective, secondly it ensures a longer brush life. Because of the elastic suspension and the long brush hairs the animal can never be brushed too forcefully, so damage to the skin or the brush is prevented.

• THE BRUSH DOES NOT NEED ANY SPACE IN THE BARN

Can be positioned anywhere in the barn. Is hung from the truss by means of the chains that are supplied with the brush.

• MOST EFFECTIVE

Because of the large diameter of the brush, the long brush hairs and the elastic suspension, the cow is brushed completely

• NYLON BRUSH

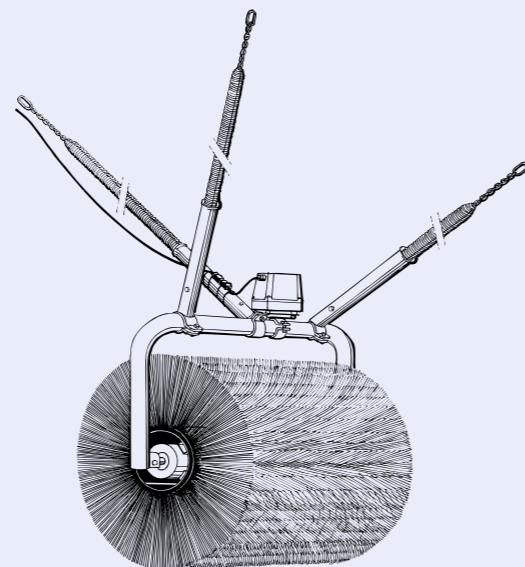

Nylon is wear-resistant and deforms less than polypropylene

• SURE

The tail cannot get entangled because the diameter of the brush is larger than the length of the cow's tail. The brush doesn't have parts in which the tail can get jammed. At time of resistance the brush motor will hold.

• MAINTENANCE FREE

2 years guarantee and 5 years on the nylon brush

CATTLE BRUSH

Because of the flexible construction of the horizontal brush it will be proof against animals in heat mounting each other. The horizontal brush has a unique spring fastening

- The spring of the horizontal brush is pressed around the tube with great force.
- As a result the maximum number of windings is utilized.
- The horizontal brush cannot turn.

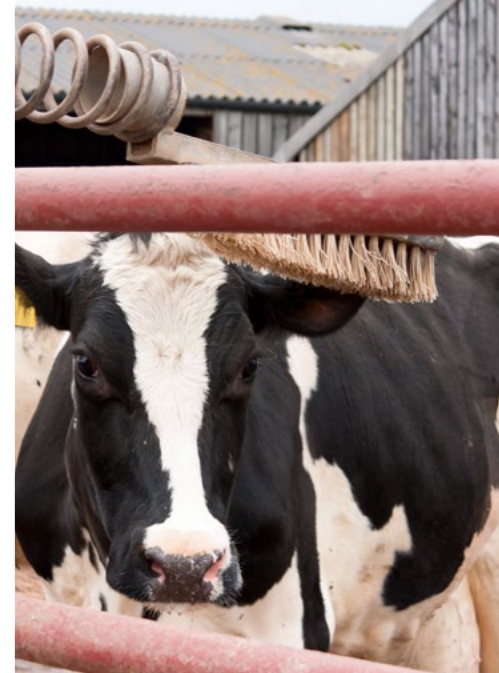

Cattle brush with dispenser

- Keeps the animal's skin clean and healthy
- Makes shaving unnecessary
- For use in the stable but also in the field.

The solution of the problem how to fight skin parasites as: sarcoptes, lice, fungus and skin diseases caused by flies. Effective and economical use of the pesticide because of the adjustable on/off control tap. Rubs the pesticide well into the irritated skin because the animals use the brush especially on the itching spots. Also effective for mastitis caused by insects.

The Vink pig's brush can also be supplied without a container

Pig's brush

If the pig is pestered by skin parasites or flies, the container can be filled with a pesticide. The on/off tap is adjustable. In hot weather the container can be filled with water, the animals can moisten their skins and in this way they cool off.

- The container can also be equipped with a float and be connected to low -pressure water supply.
- The quantity of the liquid is adjustable
- Prevents boredom and pigs love using the brushes. It gives them something to do and the brushes keep the skins of the animals clean and healthy. The Vink pig's brush can also be supplied without a container
